pymetrics

ABOUT THIS REPORT

This report provides an overview of your behavioral attributes -- your unique cognitive, social and emotional characteristics -- to give you insight into where you are most likely to thrive at work, and techniques you can implement when outside of your comfort zone.

This report is intended to be used by you and your manager or to help guide conversations around how to maximize your professional potential, and bring your best self to work.

OVERVIEW OF PYMETRICS METHODOLOGY

pymetrics behavioral traits measure natural tendencies that are quite stable, and tend to remain consistent over time. These behavioral traits are assessed based on thousands of data points gathered during your gameplay. No two people play pymetrics games the exact same way, and thus no two people have exactly the same results. Each behavioural trait is measured on a continuum, with this report outlining the end of the continuum most reflective of your natural tendencies. There is no right or wrong - everyone is different and there will be instances where your natural tendencies will support your effectiveness in the workplace and times where you will need to adjust your behaviours to suit the situation with which you are faced.

INTERPRETING THIS REPORT

This report describes your unique results in the context of the workplace, and provides actions that you can take to support your professional development. It includes the following sections:

Your results
A brief description of what your behavioral attributes mean
Your strengths
Includes detail on how your attributes may support you at work, and where you are most likely to thrive
Maximising your strengths
Actions you can take to harness your attributes for even greater success
Developmental Opportunities
Considerations around how your attributes may lead to challenges in some work contexts
Ways to Develop
Suggested actions you can take or ways to adjust your behaviour when required, to meet the demands of your work environment

This report is intended to be used for professional development purposes only, and should be considered in the context of your current role and future career plans. This is one source of information which can help you understand more around your natural tendencies and the strengths you bring, as well as highlighting development areas you may wish to focus on to support your effectiveness in a variety of circumstances and ultimately help you grow. You can maximise the value you get from this report by using it to support conversations between yourself and your manager around how to reach your full potential.

The information contained in this report is private, therefore it should be stored in a secure place and only shared with those who have permission to see this information.

pymetrics

BEHAVIORAL ATTRIBUTE SUMMARY

Below is a summary of your results for each of the behavioral attributes measured by pymetrics. Detailed descriptions of each attribute, and corresponding areas for development can be found in the next section.

LEGEND

STRONG TENDENCY TOWARDS THIS DIRECTION **TENDENCY TOWARDS THIS DIRECTION**

The two quadrants at the outer end of the continuum show a strong tendency towards the direction, whereas as the two quadrants closer towards the center show a slight tendency towards this direction.

YOUR RESULTS

Attention	BIASED TOWARDS ACTION		**METHODICAL**
Approach to managing incoming information and distractions.			
Decision Making	**INSTINCTIVE**		DELIBERATIVE
Approach to making decisions.			
Effort	OUTCOME-DRIVEN		**HARD-WORKING**
Approach toward investing effort based on size of reward and probability of success.			
Emotion	**CONTEXT-ORIENTED**		EXPRESSION-ORIENTED
Strategy for interpreting the emotions of others.			
Fairness	**CRITICAL**		ACCEPTING
Perceptions of fairness in social situations.			
Focus	**MULTI-TASKING**		FOCUSED
Concentration style for one or more tasks.			
Generosity	FRUGAL		**SHARING**
Tendency to prioritize the needs of others above one's own.			
Learning	**CONSISTENT**		ADAPTIVE
Approach to changing behavior based on new information.			
Risk Tolerance	CAUTIOUS		**ADVENTUROUS**
Level of comfort with risk-taking.			

DETAILED BEHAVIORAL ATTRIBUTES

Attention BIASED TOWARDS ACTION **METHODICAL**

Definition

Approach to managing incoming information and distractions.

Your Results

Your results suggest you are methodical. You approach tasks in a thorough and controlled manner, preferring accuracy over speed to avoid mistakes.

Strengths

As you approach tasks in a structured way, you appear to place greater emphasis on being accurate in the work you deliver, rather than being quick. This thorough approach means you are also likely to avoid making mistakes. As a result, you are likely to work well in environments that give you the time to thoroughly process information and deliver on your work, and where a high degree of accuracy is required.

How to Maximize Your Strengths

- Focus on tasks that require a high attention to detail and where you are able to dedicate the time you need to ensure accuracy. Not everyone is as thorough in their approach as you, and so you can support the overall quality of the work delivered by yourself and your team by taking advantage of your skills.
- For those tasks where attention to detail is critical, help to set up systems (e.g. peer reviews/cross-checks) to support yourself and your team to ensure accuracy. This will be particularly helpful for those situations where you might be under time pressure and for those teammates for whom delivering work with a high degree of accuracy is more challenging.

Development Opportunities

Whilst being attentive to detail and thorough in your approach is an asset in most work environments, there are times where it can prevent you from getting the job done within tight timelines. Such situations often don't provide the opportunity to carefully plan or focus on complete accuracy. Simply moving forward and getting the job done, even if it's not perfect or a few mistakes are made along the way, might be more favorable than missing the opportunity or risking a bigger problem due to inaction.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- Break down large projects or tasks into smaller steps. Challenge yourself to complete each step as quickly as possible and do not become preoccupied with the detail. Once all steps are completed, if there is time, go back to ensure the detail is up to the required standard. This way, if you do run out of time, you will still have a draft or outline ready to share with others.
- Be clear upfront how time critical the task is. To make sure you are not over-investing, check in with your colleagues to clarify the level of detail and accuracy required, especially for those tasks that have quick turn-around times.
- Be open to asking for feedback or support from your teammates to briefly check your approach to working on a particular task. Often there are methods that others use to get work completed faster. Consider which approaches you could try, to accelerate progress.

DETAILED BEHAVIORAL ATTRIBUTES

Decision Making

INSTINCTIVE ■ DELIBERATIVE

Definition

Approach to making decisions.

Your Results

Your results suggest you are instinctive. You tend to make decisions quickly, based primarily on intuition and with less focus on planning.

Strengths

Your intuitive nature enables you to make quick decisions and deliver work in a timely manner. You are able to draw on your experience to respond to situations or problems quickly and decisively, which may support you to rapidly take advantage of opportunities that are presented at work. You may work best in fast paced and dynamic environments where quick decision making is most important.

How to Maximize Your Strengths

- Place yourself in high-pressure environments that require decisive action. Your ability to rely on your experience and intuition to make decisions quickly will enable you to tackle those situations efficiently and make the most of opportunities.
- Your tendency to be intuitive and make rapid decisions can provide a balance to colleagues who prefer to take the time to think things through carefully. When working under time pressure, help your colleagues make quicker decisions by providing your input and the reasons for making this decision. This will help accelerate the decision making process and ensure deadlines are met.

Development Opportunities

Being an instinctive decision maker has many advantages, however there are times when a slower, more thoughtful and planned approach is important. This is particularly the case where past solutions will not work, and where data and facts are required to truly understand the problem that needs solving. Developing a thorough understanding of the situation takes time. When dealing with high stakes situations, if there is a risk that your decision could lead to unintended or significant consequences, you might find it beneficial to take more time than you usually would to fully consider the pros and cons of each option before deciding.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- Whenever you have to make a decision, take a step back and consider whether there is an alternative way to approach the situation, or whether it can be viewed from a different angle. Make sure you have the opportunity to ask questions and gain clarity before making any decisions. Practice by thinking about past decisions that you have made and whether the outcome would have been different had you taken more time to think things through.
- Consider whether the decisions you are making could have unintended or significant consequences. If the answer is yes, take the time to fully consider the pros and cons of various options, and to seek guidance from other team members. This will enable you to make sure that such decisions have been carefully considered and that you are taking more rational or factual inputs into account to balance your intuitive approach.
- Working backwards from the outcome can help determine what decisions should be made. Think about the desired outcome and critically evaluate whether the options you are considering will help you to achieve the desired results. Ask yourself whether you may be favoring a particular option because it is familiar to you. Is there an opportunity to do things differently this time? Could this lead to better outcomes? Questioning assumptions and thinking critically about options can often lead to stronger outcomes.

DETAILED BEHAVIORAL ATTRIBUTES

Effort OUTCOME-DRIVEN **HARD-WORKING**

Definition

Approach toward investing effort based on size of reward and probability of success.

Your Results

Your results suggest you are hard-working. You tend to work equally hard across all tasks, regardless of the expected reward for task completion.

Strengths

You are intrinsically motivated, which means that you remain driven and committed to achieving your goals regardless of how much praise you receive from others. You are therefore able to work well in environments where rewards and recognition are infrequent. In addition, you see the value of completing less important tasks well. As a result, you are likely to invest all of your energy into everything that you do, which makes you a reliable contributor.

How to Maximize Your Strengths

- You have the natural tendency to complete all tasks, even less important ones, to a high standard. To maximize this strength, try to find any shared tasks or responsibilities that may be overlooked when working with others. By completing tasks that often get overlooked, your colleagues will see you as both dependable and reliable.
- Your natural ability to self motivate enables you to push forward, even in the absence of encouragement from others. However, it’s important to make sure your efforts and contributions are communicated to others, especially when tasks or workloads are shared. Letting others know when you have finished a shared task can help to avoid duplication of effort from other team members.

Development Opportunities

Being hard working across all tasks, regardless of the expected reward, has many benefits. However, it might also lead you to become less likely to prioritize important tasks over lower impact ones. As a result, you might overextend yourself dedicating equal time and energy to all tasks during busy periods at work. To ensure you deliver your work on time without spreading yourself too thin, you may need to adjust your approach.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- Try to think critically about your priorities at work. Establish an urgency/importance framework with your manager to help you determine how much energy and effort you should invest in tasks. It is important to revisit your list of priorities frequently to ensure that you are working on the tasks that have the biggest impact on the business objectives.
- Be mindful of your workload and what you can realistically accomplish within a set timeline. Before undertaking a task, check in with your manager or teammates to determine how much work is actually required to deliver on the task or solve the problem. Try to only dedicate the required effort for the task.
- Keep in mind that your colleagues who are driven by outcomes might leave less important tasks for others so that they can focus on higher impact work. Because of your tendency to complete all tasks perfectly, you might unintentionally pick up someone else’s low impact work. While this is okay on occasion, in the long run this may become a source of frustration. Don’t be afraid to refuse to complete less important tasks for others or to delegate them to the appropriate teammates so that you can have enough available time to focus on more important work.

DETAILED BEHAVIORAL ATTRIBUTES

Emotion CONTEXT-ORIENTED EXPRESSION-ORIENTED

Definition

Strategy for interpreting the emotions of others.

Your Results

Your results suggest you are context-oriented. You tend to interpret emotions from the context surrounding a situation more than from facial expressions.

Strengths

Your focus on contextual information when interpreting other people's emotions is likely to help better understand how someone may be feeling. This can be helpful when someone may present a facial reaction which differs to how they may be truly feeling. This can help you connect with others and build relationships with your team and customers. Your contextual orientation can also be of benefit in situations where face to face interactions may be limited.

How to Maximize Your Strengths

- Your approach to understanding emotions is especially effective where the facial reactions of an individual may not align with the actual emotion they are experiencing. In these situations, ask probing questions to check your understanding of how the person may be feeling, e.g. "it seems like something is worrying you?" or "you appeared frustrated during the meeting, did you disagree with the proposed solution?"
- In situations where it is critical to get a strong understanding of how others may react or feel towards information or ideas you intend to share, consider developing an empathy map. Empathy mapping involves thinking through and documenting what someone may think, what they may feel, what they may say, as well as what they are likely to gain or lose in response to your actions or ideas. This process can help to inform the way you strategically approach the situation to ensure desired outcomes.

Development Opportunities

Whilst your reliance on contextual information can help you understand the bigger picture surrounding someone's reaction, you may need to be mindful of situations where an individual's emotional response may not be related to the surrounding context. For example, someone's previous experiences and cultural background may influence their emotional reactions to events, resulting in a response that may be different to how you would feel or act under the same circumstances.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- Using contextual information to determine how someone is feeling can be difficult if you are interacting with a person for the first time and have limited information available to you. Asking open questions can help you get a better understanding of the person you're speaking to. Avoid making assumptions that could lead to misinterpretation of their reaction.
- Be mindful of individual differences and norms that may influence how a person expresses themselves. For example, a more introverted colleague may express enthusiasm differently to someone more extroverted. Getting into the habit of reflecting on how a particular situation may seem from someone else's perspective or how your message may be interpreted by different people can help you to minimize misunderstandings and support effective communication.
- You may find it helpful to reflect on how your assumptions and interpretations of others' reactions may be influenced by your previous experiences. For example, if you have grown accustomed to working with colleagues who appreciate feedback, you may struggle to notice when someone has a less enthusiastic response to feedback. Try to combine the information you can observe from the person's facial expression and body language together with your contextual understanding to ensure a well-balanced approach.

DETAILED BEHAVIORAL ATTRIBUTES

Fairness

CRITICAL ACCEPTING

Definition

Perceptions of fairness in social situations.

Your Results

Your results suggest you are critical. You tend to be slower and more critical when judging the fairness of social situations.

Strengths

You tend to work well in environments where the stakes are high and you are required to be cautious or 'on-guard', ensuring that outcomes are fair and equitable for all stakeholders involved. You may feel comfortable holding others accountable for how work and resources are delegated. You may also be a strong negotiator, whereby you will seek to get fair and equitable results for yourself and those you are representing.

How to Maximize Your Strengths

- Working with your team members, think of ways you can hold each other accountable as a way to maintain motivation and engagement, especially for tasks or projects that may feel monotonous. Think of ways to champion team member recognition so that individual contributions are identified and acknowledged appropriately.
- For projects where the tasks may be ambiguous or unclear, try and see how you can distribute the workload equally across the team. Think about how you can clarify the situation as best you can by collecting feedback from stakeholders, your manager, and your team. Take some time to consider all the options with the team before making a plan.

Development Opportunities

Whilst your critical perceptions of fairness can help protect you from being taken advantage of, you may feel challenged when you are not clear on the rationale behind decisions made that relate to the division of work or allocation of resources. In these situations, you may experience a sense of frustration. You may also hold others to high standards which are difficult to achieve, or be seen on occasion as being overly critical of the decisions made by others.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- When working with a diverse group of people, aim to pursue win-win outcomes when making decisions. Start by making sure each team member understands the overall goals of the project, as well as their individual goals, so that everyone is on the same page. Think about how you can put yourself in other people's shoes to understand whether they perceive the situation as fair for them. Then, try to find ways to allocate the workload in an equitable way.
- When you find yourself in a negotiation, seek to understand what others stand to gain and what they stand to lose. Some questions you could ask include: Why is that important to you? What part worries you the most? What are you most comfortable with? These questions can help you develop a deeper understanding of the reasons why the other parties might be seeking the outcome they are after, and bring balance to your natural tendency to be critical regarding the fairness or equity of the outcomes desired by others.
- Find opportunities to work with teams where there is an expectation of mutual trust and collaboration, and practice being comfortable in having limited knowledge of how work was allocated to each member. You are likely to benefit from being able to see how this way of working can also result in great outcomes without having to be too focused on the fairness of the situation.

DETAILED BEHAVIORAL ATTRIBUTES

Focus MULTI-TASKING FOCUSED

Definition

Concentration style for one or more tasks.

Your Results

Your results suggest you are multi-tasking. You tend to think quickly and can handle multiple changes in tasks or the environment smoothly, adapting to changing circumstances with speed.

Strengths

You are likely to feel comfortable in fast paced, dynamic environments where you are required to rapidly switch between activities and balance a range of demands. You can think quickly and can handle changes in the environment with ease. This enables you to respond to what is most critical in the moment and take on new priorities as they emerge in a way that you may find energizing. In addition, it can support you to rapidly problem solve and collaborate with others in an agile way.

How to Maximize Your Strengths

- As you tend to enjoy variety in the way you work, you'll likely find value in having the opportunity to work collaboratively with others. Take time to brainstorm ideas and discuss new information or insights with colleagues. The outcome of these discussions could support you to bring original ideas to your current work and inspire you to engage in additional projects or lend your support to others.
- Given your preference for diversity, spend time identifying work areas that are of interest to you but that you currently have limited experience in and seek tasks and responsibilities related to these areas. By seeking experiences that push you outside of your comfort zone you will likely learn new skills and feel more fulfilled in your role.

Development Opportunities

As a multi-tasker, you may find it more difficult when you have to spend long periods of time on one task before you can move on to the next. You may feel less stimulated when completing activities that are repetitive in nature and lack variety. You may also need to be careful that task switching is not compromising productivity or leading you to lose focus on tasks that may require your sustained attention.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- It's easy to get distracted when the task you are working on feels overwhelming. Try chunking large tasks into shorter milestones that can be completed faster. Set yourself a break time between each milestone and devote your attention to something else. By allocating dedicated breaks, you will be less likely to shift focus at the wrong times.
- Take the time to identify the tasks that require your dedicated focus and practice blocking time in your calendar to engage in this work. We can often get caught up in responding to tasks that require our immediate attention but these are not always the most important things we could be doing. By blocking dedicated time to complete your most important work, you actively prioritize getting these done, and will be more productive as a result.
- Your natural preference is to attend to new information or alerts as quickly as possible. However, at times these distractions may get in the way of important tasks. When you have to focus on something for an extended period of time, turn off notifications on your email or phone if possible, in order to create a distraction-free environment.

DETAILED BEHAVIORAL ATTRIBUTES

Generosity

FRUGAL — **SHARING**

Definition

Tendency to prioritize the needs of others above one's own.

Your Results

Your results suggest you are sharing. You trust the good intentions of others and balance your personal needs with the needs of others.

Strengths

Your sharing approach is likely to help create positive working relationships. This is supported by your trusting nature, and your willingness to help and share your knowledge or resources with others. By working with others in this way, you can help to foster a work environment where people feel safe to be themselves, and where others are likely to want to help you in the same way you are willing to help them.

How to Maximize Your Strengths

- When we approach others with generosity, we encourage higher levels of trust, which in turn creates greater happiness, satisfaction and even allows for creativity. Generosity comes in many different forms, so practice with different ways you can show generosity. This can include giving credit where it's due, being sensitive to people's boundaries, planning ahead so you don't inconvenience others or being generous with your listening. By role modelling these approaches to generosity, you increase the likelihood of your colleagues becoming more generous too.
- Think of different ways in which you can maximize your ability to share new resources and learnings that you may have come across with your team members. You may also discover new opportunities for learning from others in this way. Sharing learnings with others can also be a great way to develop networks and allow you to gain a deeper understanding and awareness of the latest opportunities within your workplace.

Development Opportunities

While in most instances your giving nature is positive, there are times where being overly generous with your support can negatively impact your own work or commitments you have already made to others, as you stretch yourself too thin. In addition, you may find it difficult to work in environments which are more competitive and focussed on individual achievement as these tend not to encourage collaboration, trust and generosity. Being trusting of others can help build relationships, however being too trusting can lead to instances where your good nature is taken advantage of, or you agree to things which are ultimately not in your best interest.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- Think twice before taking on additional tasks or responsibilities, especially if your workload is already high. Reflect on the time and resources that are currently available to you prior to making a commitment and remember, it is ok to say no to a task if it means you will struggle to deliver on your own commitments. If others approach you asking for help, get into a habit of asking when they need the help by, what exactly would be needed and whether you can get back to them on your availability. You will find that most people are understanding if you are unable to provide support when you have your own commitments you need to deliver on.
- When faced with an important decision, take the time to critically evaluate the information you are being given, rather than accepting it on face value. Ask questions to determine the research that was undertaken, stakeholders engaged, and any data that may be available to back up the assertions made. This will help you evaluate the credibility behind the claims and make a fully informed decision rather than one based on face value.
- Although your tendency to prioritize others and share your resources with them is likely to be in good faith, it can be interpreted by some individuals in the wrong way or as indication that you think they need your help. Communicating clearly your confidence in others' abilities and independence whilst also signalling that you are open to supporting them if the need arises, can help avoid any potential awkward interactions. Assure them of your availability to help without compromising others' confidence in themselves. This can be done by first acknowledging that you've noticed they have a high workload, and then asking if they would like some help e.g. I noticed that you're really busy lately, is there anything I can help you with?

DETAILED BEHAVIORAL ATTRIBUTES

Learning

CONSISTENT ADAPTIVE

Definition

Approach to changing behavior based on new information.

Your Results

Your results suggest you are consistent. You are not deterred by mistakes and prefer taking known approaches over trying new ones. You also take the time to think things through before changing your approach to a problem.

Strengths

You are likely to find it easy to work in environments that require you to follow processes and procedures that are routine and consistent, and which do not require constant change. Where change is required, you will carefully evaluate your options before implementing something new. When faced with mistakes, you can move forward relatively quickly so they don't slow your progress towards your goal. You learn best through experience over time.

How to Maximize Your Strengths

- Your careful and considered approach to change means you are suited to situations where deviating from procedure carries risk. This approach will also support you to encourage your teammates to carefully consider the implications before deciding on a course of action.
- As you are likely to thrive in environments where following well established processes and procedures is crucial, you are less likely to become bored or see a drop in performance when completing routine tasks. You can use this strength to guide your teammates who are less comfortable in these situations, with suggested strategies to stay focussed and engaged.

Development Opportunities

Whilst your comfort with routine and familiar processes can support you to work in environments which are more stable, we all need to face change from time to time. In fact, in some roles, change is more common than stability. Watch out for instances where you may hold onto existing solutions and processes when they no longer work to solve current challenges. You could be missing valuable opportunities to innovate and learn. When faced with ambiguity, you are likely to feel less confident and therefore may take longer to make a decision on how to move forward. Sometimes the certainty you seek to give you the confidence to move forward may simply not be there.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- Consider challenging yourself by trying out new ways of working. You can do this by reflecting on improvements to tasks you regularly complete, trialling these approaches for a few weeks, and then reflecting on key learnings and experiences with your manager. You might find that such changes actually enhance the satisfaction you feel in completing your work.
- Reflect on changes or new experiences in the past where you decided not to take part. What are some of the benefits that would have been gained had you participated or embraced the change? What did you miss as a result of not participating? How would you approach these situations differently in the future? Use these reflections to create some principles you can apply when you face change in the future.
- When dealing with situations where the solution is not clear, take a step back and ask more questions to gain a deeper understanding of what might be the causes of the problem in the first place. With this information, seek out the help of others who may have solved a similar problem in the past or who bring different and diverse perspectives. They may help you to consider the problem in a way you have not done before and therefore come up with a solution you might not have thought of otherwise.

DETAILED BEHAVIORAL ATTRIBUTES

Risk Tolerance

CAUTIOUS — **ADVENTUROUS**

Definition

Level of comfort with risk-taking.

Your Results

Your results suggest you are adventurous. You are willing to take risks to gain rewards or achieve better outcomes. You respond quickly in such situations and do so with confidence.

Strengths

You are likely to be confident in environments that encourage and require you to take risks. This can include situations where you need to be creative and innovative and where you are not slowed down by the possibility that things may not turn out as planned. Your comfort in taking risks means you are more likely to be open to explore new opportunities, different ways of doing things, new relationships, and as a result, deliver more innovative solutions.

How to Maximize Your Strengths

- Being adventurous means you are more inclined to try new things, which is likely to help you develop new skills. As you develop new skills, you expand the range of opportunities you can access and types of work you can engage in. So keep putting your hand up for tasks or assignments others may be reluctant to for fear of failure. Whether you succeed or fail at the task, you always learn.
- Not everyone feels confident taking risks or doing something new, however we are more innovative when we move out of our comfort zone. Act as a role model to others who may be reluctant to take risks by showing how you navigate your way through new situations, and how the learning has benefitted you and your colleagues overall.

Development Opportunities

Whilst your comfort in taking risks means you're more inclined to approach new situations and challenges with enthusiasm, it's important to bear in mind that not every risk will pay off, and harnessing the learnings is crucial to ensure you don't keep making the same mistakes. Keep an eye out for instances where your own risk appetite does not align with your organization or the situation at hand, and where you may be inclined to take risks for the thrill of it. Where there is misalignment, there is the potential for you to take risks that would be considered unjustified by the broader business, leading to a negative impact. In addition, you may prefer people who are similarly adventurous, and undervalue those who call out the risks in your ideas, seeing them as blockers rather than considering the value of their contributions.

Ways to Develop

In order to adapt to the demands of your work environment, there may be times where you have to adjust your approach. Here are some actions that you can take to support your development in this way.

- When deciding whether to take a risk, take the time to collect additional information and insight that will help you determine whether the risk is worth taking - what are the pros and cons, and likelihood of the risk paying off. You can't always predict success but you can reduce the chances of failure by taking the time to plan.
- Spend time with someone who is known to be naturally cautious or whose job it is to evaluate risks. Find out from them how they view risk, what they consider when they're facing a risky situation and how they decide whether to proceed or not. They can provide you with valuable strategies to help develop your own approach to risk.
- To mitigate the level of unnecessary risk, experiment or test concepts on a small scale first. This provides you with the opportunity to evaluate the degree of success and investigate any unintended consequences in a controlled manner, prior to a larger scale roll-out of a new approach or concept.
